

World Biodiversity Forum 2026 - Davos

BIODIVERSITY 3

Leveraging Long-Term Ecological Data for Evidence-Based Biodiversity Policy and Action

Collaborative Research Action proposal

Agence Nationale de la Recherche (**ANR** - France)

Agence Nationale de Recherche pour l'Environnement (**FERPA** - France)

Context : large-scale ecosystem degradation & crossed planetary boundaries

- Land/sea use change
- Direct exploitation
- Climate change
- Pollution
- Invasive alien species
- Others

We need to re-equilibrate research projects to actual causes of losses

b

Progress in achieving Aichi targets

On track for 2020

Insufficient progress

No progress

Moving away from target

c

Why a new Collaborative Research Action on Biodiversity

Proposal: support & enhance transdisciplinary long-term biodiversity monitoring

BIODIVERSITY III ...

... Promotes capacity building

... Supports existing programs

... Is Action oriented

... develops TD

Timeline & political context

SUSTAINABLE DEVELOPMENT GOALS

Alignment of BIODIVERSITY 3 with global initiatives

- Fits at least SDGs 13-15
- Benefits from BIODIVERSITY 1 & 2 projects
- Links with other CRAs eg OCEAN 2
- Bridge with BIODIVERSA+ (depends on FP10)

Next :

- ipbes research gaps -> contact in Nairobi
- link w/ UN Decade on Eco Restoration
- link w/ UN Ocean Decade
- Alignment w/ GEOBON, eLTER, etc.

Enhancing Long-Term Biodiversity Monitoring through Transdisciplinary Approaches for Holistic Ecosystem protection

Ambition and Scope

[BIODIVERSITY 3](#) is a [Belmont Forum](#) Collaborative Research Action currently in its co-construction phase. This means that everyone interested in the project can participate in co-construction (or “scoping”) workshops to contribute.

The main goal of BIODIVERSITY 3 is to complement and connect existing international long-term ecological research infrastructures at a broader transdisciplinary scale. It is designed to actively bridge the gap between the critical but short-term, co-designed projects fostered by the Belmont Forum and the establishment of durable, mechanistic long-term biodiversity monitoring programs.

Tip

You can receive information about the BIODIVERSITY 3 call and any capacity development events that may be taking place in advance of the official call launch, and to network with other interested parties by filling out [interest form](#).

Documents

The concept note details in a few pages the rational behind this Collaborative Research Action. The Executive summary is a one-page document for the impatient. As scoping events unfold, we will update these documents. [links coming soon]

Field of respondents

62% women - 38% men
39% early - 36% mid - 25% late career

Is long-term biodiversity monitoring adequately funded?

Is there value to add a transdisciplinary dimension to biodiversity monitoring?

3 (absolutely !
it is
interesting,
important, and
a priority)

2 (it is
relevant and
important, but
not a priority)

Next Scoping steps (July - November)

- Climate, Biodiversity & Human Behaviour (sept)
- International Marine Conservation Conference
- ICES
- UNESCO
- CBD Conference Nairobi
- 3 workshops online (3 time zones)

Next Connections (September)

- GeoBon, iLTER / ERIC, GBIF
- UN Decade endorsements
